

Fiber Optic Products Manual (Gen2 Products)

First of all, Thank you so very very much for choosing our Brand. It truly means the World to us to have you as our customer and would mean even more, if our products will bring you positive experiences wherever you go.

Please Read The Instructions Manual Before Using Our Light Up Apparel!

Charge battery modules fully before connecting them to the garment.
Find connecting cables inside of the garment and connect them to the battery modules.
Some items use 1 battery module, some uses 2. Please check all pockets and connect all necessary battery modules as needed.

- YMYW Light up products can be controlled via mobile application. The instructions on how to operate your garment will be send to you in separate PDF file.

Usage

1. Never fold the fiber optical fabric perpendicularly to the fiber optics, (for example: Do not sit in glowing hoodie, jacket, dress in a car leaning on it) as it can result in permanent damage. Never pull, distort and fold into dead angles, otherwise the products will be deformed and breakdown.
2. Prevent products exposing to external forces.
3. Handle with care to avoid breaking the fiber optics while using, because there are many processing points on the surface that can be damaged.
4. Charge the battery timely when the lights are getting dim.

Damages caused by user's poor handling are not subjects to product warranty. Only manufacturers errors are subjects for repairs and exchanges.

Placing & Removing the Battery

Please place the battery in the battery pocket first and ONLY then connect the plug to the battery!
When removing battery, please, remove plug from the battery first and then take the battery out from the pocket.

Cleaning and Washing

1. Remove battery modules and other items from apparel before cleaning.
2. **Partial Cleaning** - Products can be wiped with soft wet towel if there are stains. Wiped by using neutral detergent if necessary, then simply place it on a clothes hanger and keep it in shade to dry.
3. **Full Cleaning** - Hang item on a hanger. Spray entire apparel inside and out with washing detergent diluted with warm water in sprayer bottle. Wait 30minutes, then gently rinse apparel with running warm water (for example: in shower with shower head). After that, hang it in a shade to dry. When completely dry, plug charged battery back in and it's ready to glow.
4. **Never Wash Fiber optic clothes in washing machines or dry in dryer machines.**
5. If you prefer, you can call your local dry cleaners and ask them to clean it for you.
(Tell them they will be cleaning product made from fiber optic fabrics)

Partial Cleaning Instructions:

Environment

1. Avoid using fiber optical products in high humidity and dirty environment. The attenuation of the optics and the discoloration of fiber optical surface will be increased if the products surface is smeared or dusty.
2. Fiber optic apparel must be kept in ventilated, dry and waterproof areas.

3. Avoid exposing to the UV radiation directly and using fiber optical products under the high energy ray situations.
4. Avoid putting products together with plasticizer or polymer materials with plasticizer. The products should be protected from the influence from organic chemicals, including propiophenone, ethyl acetate, diluent, petrol and so on.

Temperature Range

The operation temperatures for fiber optic products are between -10 to 50°C. At high temperatures the fiber optical fabrics will melt and deform, while at very low temperatures fiber optic fibers will break.

If you are satisfied with our product please give us 5 STAR review on a platform where you purchased it. It will mean the WORLD to us :) Hope you will enjoy wearing our products, it took us long time to get here and we spent countless amount of time and money to bring you our light up fashion.
